

2026 STUDENT BROCHURE

Full Stack Development

Python or Java—with AI

Practical training for students and freshers who want to build real applications, strengthen coding confidence and prepare for entry-level developer opportunities.

3-5 MONTHS

ONLINE / OFFLINE

PROJECT-BASED

AI-INTEGRATED

Artlysoft Learning Lab

LIVE PROJECT

Learn

Code

Project

Career

Build a job-ready portfolio

HTML + CSS

JavaScript

React

Python / Java

Database + APIs

AI + Deployment

LEARN → BUILD → PREPARE

Training Fee: ₹35,000

Placement consideration is performance-based.

WELCOME

Start with skills that work in the real world.

Artlysoft Private Limited is a software development and IT consulting company building modern applications, cloud and DevOps solutions, AI-enabled systems and its own education platform, Artlysoft TalentOS.

WHY ARTLYSOFT TRAINS DEVELOPERS

We teach the way software is actually built.

The program connects concepts to coding tasks, reusable components, APIs, databases, teamwork and project delivery. Students are expected to practise—not only watch.

**INDUSTRY RELEVANCE**

Skills connected to current full-stack development practices.

**PRACTICAL APPLICATION**

Regular coding, assignments and project-building.

**CAREER PREPARATION**

Portfolio, resume, interviews and readiness reviews.

OUR PURPOSE

Bridge the gap between academic knowledge and the practical skills required to contribute to software teams.

This is a training and skill-development program.

WHY THIS PROGRAM

Knowing syntax is not the same as building software.

Students often complete tutorials or academic exercises but struggle to combine frontend, backend, database, debugging and deployment into a complete working application.

**Tutorial knowledge**

Concepts learned separately without an end-to-end product view.

**Coding hesitation**

Limited repetition makes independent problem-solving difficult.

**Weak portfolio**

Projects may not clearly demonstrate ownership or technical decisions.

**Interview gap**

Candidates know answers but cannot explain or apply them confidently.

THE PROGRAM RESPONSE

GOAL

Become capable of explaining, building, debugging and improving a complete full-stack application.

WHO CAN JOIN

Designed for learners ready to practise consistently.

You do not need to know everything before joining. You do need curiosity, regular attendance and the willingness to code between sessions.

**College students**

Build practical skills alongside academic study.

**Fresh graduates**

Create projects and prepare for entry-level developer roles.

**Non-IT graduates**

Enter development through a structured foundation.

**Career switchers**

Move toward software roles through guided practice.

**Early-career professionals**

Strengthen full-stack knowledge and project confidence.

WHAT YOU NEED

- A laptop suitable for development
- Time for classes and daily practice
- Commitment to assignments and projects
- Stable internet for online participation
- Basic English comprehension
- Openness to feedback and teamwork

Previous programming experience is helpful but not compulsory for the foundation stage.

PROGRAM OVERVIEW

Everything important—at a glance.

The exact learning pace depends on the selected track, attendance, coding practice and performance across assignments and projects.

DURATION

3-5 months

Based on coding progress and performance.

TRAINING FEE

₹35,000

Payment terms are confirmed before enrollment.

MODE

Online / Offline

Availability depends on the announced batch.

TRACKS

Python or Java

Both tracks include frontend, database and AI.

LEARNING STYLE

Practical & project-based

Classes, coding tasks, assessments and projects.

CAREER PATH

Performance-based

Eligible learners may be considered for placement.

PROGRAM OUTCOME

A complete full-stack portfolio, stronger technical fundamentals and clearer readiness for developer interviews.

Important: training completion does not automatically create an employment offer. Eligibility depends on skills, performance, conduct and available roles.

CHOOSE YOUR TRACK

Python with AI or Java with AI.

Both tracks share the same frontend foundation and career preparation. The main difference is the backend ecosystem and the type of applications emphasized.

FULL STACK PYTHON

Python + AI

A practical route for web applications, automation, data-driven features and AI-enabled product development.

- Python fundamentals and OOP
- Backend framework and REST APIs
- Database integration
- Authentication and business logic
- AI / ML integration basics
- Deployment-ready capstone

FULL STACK JAVA

Java + AI

A structured route for enterprise applications, strong object-oriented design, APIs and scalable backend development.

- Core and advanced Java
- Object-oriented programming
- Spring / Spring Boot concepts
- REST API development
- Database and service integration
- AI-enabled capstone options

COMMON FOUNDATION

HTML • CSS • JavaScript • Bootstrap • React • SQL • Git • APIs • deployment • interview preparation

Track selection is finalized during counseling based on interest, learning goals and batch availability.

LEARNING JOURNEY

A structured path from foundation to career readiness.

Each stage builds on the previous one. Progress depends on completing tasks and demonstrating understanding—not only attending sessions.

PROGRESS PRINCIPLE

Understand → apply → explain → improve

CURRICULUM MAP

Five layers of full-stack development.

The program moves from browser fundamentals to a complete deployed application, with AI concepts integrated where they add practical value.

CAPSTONE

Apply every layer in one documented, demonstrable full-stack project.

CURRICULUM DETAIL

HTML and CSS foundations.

Build clean, responsive interfaces and understand how browser structure, styling and accessibility influence the user experience.

FOUNDATION OUTCOME

Translate a design into a responsive web page.

HTML5 structure

Semantic elements, forms, tables and media.

CSS fundamentals

Selectors, box model, typography and color.

Modern layouts

Flexbox, Grid and reusable page structures.

Responsive design

Breakpoints, fluid sizing and mobile adaptation.

Accessibility basics

Labels, hierarchy, keyboard-aware patterns.

UI implementation

Convert reference layouts into working pages.

PRACTICE EXAMPLE

Create a responsive product landing page with forms, navigation and reusable sections.

CURRICULUM DETAIL

JavaScript and interactive web development.

Move from static interfaces to dynamic applications by understanding programming logic, browser APIs and asynchronous workflows.

**LANGUAGE CORE**

Variables • functions • arrays • objects

**DOM & EVENTS**

Interactive forms • validation • UI changes

**MODERN JAVASCRIPT**

ES6+ • modules • destructuring • spread

**ASYNC PROGRAMMING**

Promises • async/await • API calls

**DEBUGGING**

Console • errors • step-by-step diagnosis

**BOOTSTRAP**

Responsive components and grid system

SKILL CHECK

Fetch data from an API, validate user input, render results and handle loading and error states.

WHY IT MATTERS

JavaScript connects the interface to data, decisions and backend services—the core behaviour of a modern web application.

CURRICULUM DETAIL

React application development.

Learn to organise interfaces into reusable components, manage application state and connect the frontend to backend APIs.

REACT MINDSET

Build interfaces as reusable systems.

- Components and props
- State and event handling
- Hooks and effects
- Forms and validation
- Routing and navigation
- API integration
- Loading and error states
- Reusable UI patterns

**COMPONENT DESIGN**

Break screens into maintainable reusable parts.

**STATE MANAGEMENT**

Keep user actions and data consistent across views.

**API-DRIVEN UI**

Display, create and update data through backend services.

**PROJECT STRUCTURE**

Organise files, responsibilities and reusable utilities.

PRACTICE EXAMPLE

Create a role-based dashboard with authentication, forms, data tables and API integration.

PYTHON TRACK

Backend development with Python and AI.

Build server-side logic, structured APIs and database-connected applications while developing a foundation for automation and intelligent features.

01

PYTHON CORESyntax • collections •
functions • modules

02

OOP & DESIGNClasses • objects • reusable
logic

03

WEB BACKENDRouting • services • request
handling

04

REST APIsResources • validation •
status codes

05

DATABASEModels • queries •
transactions

06

AUTHENTICATIONUsers • roles • protected
endpoints

07

AI INTEGRATIONApproved model or ML-
assisted features

08

TEST & DEPLOYDebugging • tests •
production setup**TRACK OUTCOME**

Build a database-backed Python application with authenticated APIs and an AI-assisted feature appropriate to the project.

Specific Python framework and AI services may vary by batch and project scope.

JAVA TRACK

Enterprise-oriented backend development with Java.

Develop strong object-oriented foundations, structured services and database-connected APIs using the Java ecosystem.

JAVA DEVELOPMENT PATH

Structure, reliability and scalable service design.

CORE JAVA

Syntax, collections, exceptions and packages.

OBJECT-ORIENTED DESIGN

Classes, interfaces, inheritance and composition.

ADVANCED CONCEPTS

Streams, concurrency awareness and reusable patterns.

SPRING FOUNDATION

Dependency injection and application structure.

SPRING BOOT APIs

Controllers, services, validation and REST.

DATA ACCESS

Database mapping, queries and transactions.

SECURITY BASICS

Authentication, roles and protected services.

AI-ENABLED OPTION

Connect an approved intelligent feature to the capstone.

TRACK OUTCOME

Build and explain a structured Java backend connected to a modern frontend and relational database.

SHARED CURRICULUM

Databases, APIs and application integration.

Full-stack developers must understand how data is structured, protected and exchanged between the browser, backend and database.

DATABASE FUNDAMENTALS

- Tables, rows and relationships
- Keys and constraints
- CRUD queries
- Joins and aggregation
- Schema design
- Indexes and query awareness

REST API FUNDAMENTALS

- Resources and endpoints
- HTTP methods and status codes
- Request validation
- Authentication concepts
- Error responses
- Frontend integration

DATABASE OPTIONS

MySQL and PostgreSQL concepts are covered according to track and project requirements.

PRACTICAL RESULT

Design data, build APIs, connect the UI and explain the complete request flow.

AI INTEGRATION

Use AI as a development capability—not a shortcut.

Learners explore how intelligent features can be added responsibly while still understanding the application, data and code around them.

AI-ENABLED DEVELOPMENT

Prompt, integrate, validate and improve.

- Understand AI use cases and limitations
- Connect approved AI services through APIs
- Prepare structured input and context
- Validate output before using it
- Protect sensitive information
- Explain where AI fits in the project

**Resume assistant**

Improve structure without inventing information.

**Job recommendation**

Match skills and experience to suitable roles.

**Content helper**

Generate reviewed drafts or learning support.

**Data summary**

Turn approved information into concise insights.

RESPONSIBLE USE

AI-generated output must be reviewed. Students remain responsible for understanding, testing and explaining their submitted work.

DEVELOPER WORKFLOW

Git, collaboration, testing and deployment.

Projects are more credible when learners can manage versions, debug issues, document decisions and make an application available for review.

01

PLAN

Requirements and task breakdown

02

CODE

Feature branches and readable commits

03

REVIEW

Debugging, feedback and correction

04

TEST

Key flows and failure cases

05

DEPLOY

Environment and release basics

06

PRESENT

Demo, documentation and explanation

TOOLS & PRACTICES

- Git & GitHub
- Environment files
- Docker basics
- Issue tracking
- API testing
- Cloud deployment fundamentals

DELIVERY OUTCOME

A project that can be cloned, configured, run, demonstrated and explained to another developer.

PRACTICAL LEARNING

Projects that demonstrate real capability.

Project topics may change by track and batch. Every selected project should show clear ownership, working features, data integration and an understandable codebase.

**Responsive business website**

Layout, forms, components and responsive design.

**Task or workflow application**

Authentication, CRUD, filters and status workflows.

**E-commerce or service portal**

Catalog, user journeys, backend APIs and database.

**Student / learning platform**

Roles, content, assessments and dashboards.

**AI job recommendation feature**

Skills profile, matching logic and reviewed recommendations.

**Final capstone project**

End-to-end application with documentation and deployment.

A STRONG PORTFOLIO SHOWS

- Problem explained
- Code organised
- Project deployed
- Features working
- Data connected
- Decisions presented

Quality and understanding matter more than simply counting projects.

LEARNING DISCIPLINE

How progress is assessed.

Assessment helps learners identify gaps early and helps Artlysoft determine readiness for advanced projects and placement consideration.

**Attendance & participation**

Join sessions consistently and engage in coding activities.

**Assignments**

Submit working solutions within the communicated timeline.

**Concept checks**

Explain why the code works—not only what to type.

**Code quality**

Use readable structure, naming, validation and error handling.

**Project reviews**

Demonstrate features, decisions, debugging and improvements.

**Professional behaviour**

Communicate clearly, accept feedback and respect team expectations.

WHAT GOOD PROGRESS LOOKS LIKE

- Attempts tasks independently
- Can explain project flow
- Documents and presents clearly
- Uses feedback to correct work
- Builds features with fewer prompts
- Maintains consistent participation

Incomplete attendance, copied work or inability to explain submitted code may affect completion and placement eligibility.

LEARNING SUPPORT

Guidance that keeps students moving.

The program combines instructor direction with independent practice. Support is designed to help students solve problems—not to replace their effort.

SUPPORT MODEL

**Learn together. Practise independently.
Review honestly.**

**Live instructor-led sessions**

Concept explanation, demonstrations and guided coding.

**Doubt clarification**

Questions addressed around the announced class process.

**Task feedback**

Corrections and improvement guidance on assigned work.

**Project mentoring**

Support with planning, blockers, review and presentation.

**Peer learning**

Discuss approaches and collaborate without copying.

**Learning resources**

Batch materials shared according to program policy.

STUDENT RESPONSIBILITY

Practise, submit, ask specific questions and apply feedback.

CAREER PREPARATION

Turn your learning into a credible developer profile.

Career support focuses on helping learners communicate their actual skills and project experience accurately and confidently.

01

Portfolio readiness

Select projects, improve documentation and prepare demonstrations.

02

Resume preparation

Present skills, education, projects and experience without exaggeration.

03

GitHub profile

Organise repositories, README files and contribution evidence.

04

Technical revision

Review frontend, backend, database, APIs and project decisions.

05

Mock interviews

Practise explanation, coding, communication and feedback.

06

Application readiness

Understand suitable roles and prepare for professional follow-up.

CAREER PRINCIPLE

Show what you can genuinely build, explain and improve.

PLACEMENT PATHWAY

Performance-based eligibility—not a job guarantee.

Artlysoft may consider successful learners for suitable fresher requirements based on technical readiness, project performance, conduct and role availability.

01

Complete training

Meet academic, attendance and project requirements.

02

Technical assessment

Demonstrate fundamentals and independent coding ability.

03

Project review

Explain architecture, features, data flow and decisions.

04

Mock interview

Evaluate communication and role readiness.

05

Eligibility decision

Artlysoft reviews performance and available requirements.

06

Placement consideration

Eligible candidates may proceed to a suitable hiring process.

ELIGIBLE FRESHER ROLE

Starting basic salary indicated by Artlysoft: ₹20,000-₹25,000 per month, depending on performance and role.

Placement, role, salary and joining date are Provide after Training. External opportunities may have different selection processes and compensation.

ENROLLMENT

Ready to begin your full-stack journey?

Attend a demo, understand the expectations and choose the track that matches your goals.

01

Attend a free demo

Understand the teaching style and program expectations.

02

Counseling & track choice

Select Python or Java and confirm available mode.

03

Review written terms

Check duration, fee, policies and placement conditions.

04

Confirm enrollment

Complete the agreed payment and onboarding details.

05

Join the batch

Receive instructions and begin foundation learning.

PROGRAM FEE

₹35,000**Duration: 3-5 months • Online / Offline options**hr@artlysoft.com**9901718700**www.artlysoft.com
